Joshua Yoon Senior Software Engineer

Chicago, Illinois 60611 | linkedin.com/in/jtyoon92 | joshyoon92@gmail.com | 312 - 404 - 5822

SKILLS: Java, Spring/Spring Boot, ReactJS, Typescript, Javascript, Liquibase, Python, Agent AI, Claude Code, Skills, Kubernetes, Docker, Jules, Jenkins, Jira, Maven, Javascript, SQL, Oracle, Node.js, Jest Testing, JUnit, REST API, CI/CD, Control-M

WORK EXPERIENCE:

JPMorgan Chase Chicago, IL

SENIOR SOFTWARE ENGINEER January 2024 – PRESENT

- Built the backend for a supplier financial-risk assessment platform used by JPMorgan executives to evaluate external vendors; designed the database schema and data dictionary and built the REST APIs, shipping the full product in 2 months with a 3-person team using AI-assisted development (Claude Code).
- Engineered nightly batch pipelines ingesting 20K+ supplier records, integrated document storage for file uploads in user-facing forms, and built external API integrations using Claude Code skills.
- Partnered with product managers and business stakeholders starting from the BRD (Business Requirements Document), translating business requirements into technical specifications, and aligning on scheduling and delivery timelines to ensure the product met organizational needs.
- Built a supplier-management CRM from the ground up (Java/Spring Boot, React/TypeScript, SQL), consolidating performance, financial, and review data for 120K+ suppliers into a single source of truth for 50+ supplier managers and leadership.
- Redesigned third-party supplier data ingestion from bulk loads to incremental batched processing, improving the scalability and reliability of pipelines handling thousands of daily updates, and cutting failure rate by 90%.
- Designed AI-assisted development workflows using Claude Code (Sonnet/Opus) that cut Java backend development time by 50% and React frontend delivery by 70%; presented the approach to engineering leadership and 100+ developers.
- Developed a supplier-ratings dashboard end to end, from REST endpoints and SQL queries to a Figma-based React UI, used by leadership to assess supplier performance and risk.
- Owned backend architecture and data layer for an enterprise platform integrating 300K+ employee records with notifications, auditing, and access control; designed SQL data models and schema migrations (Liquibase, Erwin) that became the team's data standard.
- Led incident response for access, ingestion, and integration issues during platform migration, driving 90%+ of client teams onto the modernized system.

SOFTWARE ENGINEER II October 2022 – January 2024

- Owned production launch of a major release, driving an 80% increase in user journeys and onboarding 623 new users. Built an event-driven Python notification service with CI/CD, and designed reporting across 1,400 applications and 200 customer journeys that surfaced 300 friction points to guide product priorities.

Integral Ad Science: SOFTWARE ENGINEER INTERN June 2022 – August 2022

Architect: JAHN Architects, Brininstool+Lynch, Gensler June 2015 – January 2022

- Developed design for a $1.3 billion baseball stadium in Mexico City, with a design team of 10 people.
- Constructed a $64 million, 264 residential unit building with a construction schedule of 19 months in Chicago

EDUCATION:

Boston University*:* Master of Science in Software Development September 2021

Illinois Institute of Technology*:* Bachelor of Architecture May 2015
